# Lecture 15: Memory hierarchy

Philipp Koehn

March 3 9, 2021

601.229 Computer Systems Fundamentals

### Large and Fast

- ▶ We want: lots of memory and access it fast
- ► We really have: different speed/size tradeoffs
- ▶ Need methods to give illusion of large and fast memory

### Locality

- What helps us is locality
- ► Temporal locality
  - same memory location often referenced repeatedly
  - example: instructions in loops
- Spatial locality
  - after an item is referenced
  - example: processing of sequential data

### Example: Violation of Locality

Consider this C code
#define size 32768

```
int matrix[size][size];
  int main(void) {
    for(int i = 0; i<size; i++) {
      for(int j = 0; j < size; j++) {
        matrix[i][j] = 47;
    return 0;
► How fast does it run?
  $ gcc -Og cache1.c -o cache1
  $ time ./cache1
  real 0m1.710s
  user 0m0.871s
        0m0.839s
  sys
```

### Example: Violation of Locality

Consider this C code

```
#define size 32768
int matrix[size][size];
int main(void) {
  for(int i = 0; i<size; i++) {
    for(int j = 0; j<size; j++) {
      matrix[i][j] = 47;
    }
  }
  return 0;
}</pre>
```

► How fast does it run?

```
$ gcc -Og cache1.c -o cache1
$ time ./cache1
real    Om1.710s
user    Om0.871s
sys    Om0.839s
```

Minor change

```
#define size 32768
int matrix[size][size];
int main(void) {
  for(int i = 0; i < size; i++) {
    for(int j = 0; j < size; j++) {
      matrix[j][i] = 47;
    }
  }
  return 0;
}</pre>
```

► How fast does it run?

# Memory Types

| Technology          |
|---------------------|
| SRAM on CPU         |
| DRAM on motherboard |
| Flash memory        |
| Magnetic disk       |

| <b>Speed</b> fastest | <b>Capacity</b> smallest | <b>Cost</b> highest |
|----------------------|--------------------------|---------------------|
|                      | •••                      |                     |
|                      |                          |                     |
| slowest              | biggest                  | lowest              |

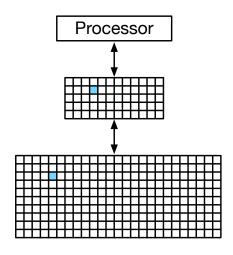

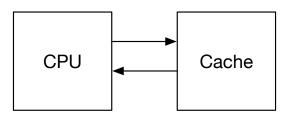

### 2 Level Memory

Smaller memory mirrors some of the large memory content

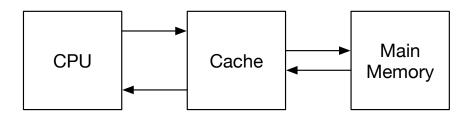

#### Cache Hit

Main Memory

- ► Memory request from CPU
- ▶ Data found in cache
- Send data to CPU

#### Cache Miss

- ► Memory request from CPU
- Data not found in cache
- Memory request from cache to main memory
- ► Send data from memory to cache
- ► Store data in cache
- Send data to CPU

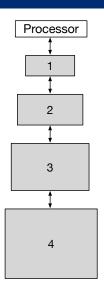

### Concepts

- ▶ Memory has to be transferred from large memory to be used
- ► Cache: small memory connected to processor
- ▶ Block: unit of memory transferred
- ▶ Hit rate: fraction of memory lookups served by data already in cache
- ▶ Miss rate: fraction of memory lookups that require memory transfers
- ▶ **Hit time:** time to process a cache hit
- ▶ Miss penalty: time to process a cache miss

# Memory Hierarchy

- ► More than 2 levels of memory
- ► Transfer between memory in level i and i+1 follows same principle, regardless of i
- ► Hierarchy: if item in level i, then it is also in level i+1
- ▶ Hence, we restrict our discussion to 2 levels

# Memory technologies

# Current Technologies

| Technology          | Access Time            | Price per GB |
|---------------------|------------------------|--------------|
| SRAM semiconductor  | 0.5-2.5ns              | \$300        |
| DRAM semiconductor  | 50-70ns                | \$6          |
| Flash semiconductor | 5,000-50,000ns         | \$0.40       |
| Magnetic disk       | 5,000,000-20,000,000ns | \$0.02       |
| Magnetic tape       | -                      | \$0.008      |

(prices from 2018)

#### **SRAM**

- ▶ Integrated in CPU, runs at similar clock speeds
- ► Implemented using flip flops
- Uses more transistors than DRAM

#### DRAM

- Separate chips on the motherboard
- ► In PCs and servers, multiple chips on a module (DIMM)
- ► Implemented using capacitors lose charge → need to be frequently refreshed
- Lose charge when power is turned off

### Flash Memory

- ➤ A type of EEPROM (electrically erasable programmable read-only memory)
  - ► allows read of individual bytes
  - writes require erase of a block, rewrite of bytes
- Writes can wear out the memory
- ► Has become standard storage memory for laptops, PCs

#### Hard Drives

- ► Magnetic charge on spinning disk
- ► Read/write requires read head at the right place
- ► Sequential data reads are relatively fast
- ightharpoonup Random access slow ightharpoonup not practical as process memory
- Useful for bulk data storage (especially when using RAID for redundancy)

# Cache basics

#### Cache

- ► All data is in large main memory
- ▶ Data for processing has to moved to cache
- Caching strategies
  - mapping between cache and main memory
  - ▶ which data to read / keep / write

### Direct Mapping

- ▶ Idea: keep mapping from cache to main memory simple
- $\Rightarrow$  Use part of the address as index to cache
- ► Address broken up into 3 parts
  - memory position in block (offset)
  - ▶ index
  - tag to identify position in main memory
- ▶ If blocks with same index are used, older one is overwritten

# Direct Mapping: Example

► Main memory address (32 bit)

0010 0011 1101 1100 0001 0011 1010 1111

▶ Block size: 1KB (10 bits)

► Cache size: 1MB (20 bits)

| 0010 0011 1101 | 1100 0001 00 | 11 1010 1111 |
|----------------|--------------|--------------|
| Tag            | Index        | Offset       |

Index Valid Tag ► Cache content Mapped Memory 000 no 001 no 010 no 011 no 100 no 101 no 110 no 111 no

| ► Cache content | Index | Valid | Tag | Mapped<br>Memory |
|-----------------|-------|-------|-----|------------------|
|                 | 000   | no    |     |                  |
|                 | 001   | no    |     |                  |
|                 | 010   | no    |     |                  |
|                 | 011   | no    |     |                  |
|                 | 100   | no    |     |                  |
|                 | 101   | yes   | 10  | 10101            |
|                 | 110   | no    |     |                  |
|                 | 111   | no    |     |                  |

- ▶ Operation: read 10101
  - cache miss
  - ▶ retrieve value from main memory

| ► Cache content | Index | Valid | Tag | Mapped<br>Memory |
|-----------------|-------|-------|-----|------------------|
|                 | 000   | no    |     |                  |
|                 | 001   | no    |     |                  |
|                 | 010   | yes   | 11  | 11010            |
|                 | 011   | no    |     |                  |
|                 | 100   | no    |     |                  |
|                 | 101   | yes   | 10  | 10101            |
|                 | 110   | no    |     |                  |
|                 | 111   | no    |     |                  |

- ► Operation: read 11010
  - cache miss
  - retrieve value from main memory

| ► Cache content | Index | Valid | Tag | Mapped<br>Memory |
|-----------------|-------|-------|-----|------------------|
|                 | 000   | no    |     |                  |
|                 | 001   | no    |     |                  |
|                 | 010   | yes   | 11  | 11010            |
|                 | 011   | no    |     |                  |
|                 | 100   | no    |     |                  |
|                 | 101   | yes   | 10  | 10101            |
|                 | 110   | no    |     |                  |
|                 | 111   | no    |     |                  |

- ▶ Operation: read 10101
  - ► cache hit

| ► Cache content | Index | Valid | Tag | Mapped<br>Memory |
|-----------------|-------|-------|-----|------------------|
|                 | 000   | no    |     |                  |
|                 | 001   | no    |     |                  |
|                 | 010   | yes   | 11  | 11010            |
|                 | 011   | no    |     |                  |
|                 | 100   | no    |     |                  |
|                 | 101   | yes   | 10  | 10101            |
|                 | 110   | no    |     |                  |
|                 | 111   | no    |     |                  |

- ▶ Operation: read 11010
  - ► cache hit

| ► Cache content | Index | Valid | Tag | Mapped<br>Memory |
|-----------------|-------|-------|-----|------------------|
|                 | 000   | yes   | 10  | 10000            |
|                 | 001   | no    |     |                  |
|                 | 010   | yes   | 11  | 11010            |
|                 | 011   | no    |     |                  |
|                 | 100   | no    |     |                  |
|                 | 101   | yes   | 10  | 10101            |
|                 | 110   | no    |     |                  |
|                 | 111   | no    |     |                  |

- ▶ Operation: read 10000
  - cache miss
  - ► retrieve value from main memory

| ► Cache content | Index | Valid | Tag | Mapped<br>Memory |
|-----------------|-------|-------|-----|------------------|
|                 | 000   | yes   | 10  | 10000            |
|                 | 001   | no    |     |                  |
|                 | 010   | yes   | 11  | 11010            |
|                 | 011   | yes   | 00  | 00011            |
|                 | 100   | no    |     |                  |
|                 | 101   | yes   | 10  | 10101            |
|                 | 110   | no    |     |                  |
|                 | 111   | no    |     |                  |

- ► Operation: read 00011
  - cache miss
  - ▶ retrieve value from main memory

| ► Cache content | Index | Valid | Tag | Mapped<br>Memory |
|-----------------|-------|-------|-----|------------------|
|                 | 000   | yes   | 10  | 10000            |
|                 | 001   | no    |     |                  |
|                 | 010   | yes   | 11  | 11010            |
|                 | 011   | yes   | 00  | 00011            |
|                 | 100   | no    |     |                  |
|                 | 101   | yes   | 10  | 10101            |
|                 | 110   | no    |     |                  |
|                 | 111   | no    |     |                  |

- ▶ Operation: read 10000
  - ► cache hit

| ► Cache content | Index | Valid | Tag | Mapped<br>Memory |
|-----------------|-------|-------|-----|------------------|
|                 | 000   | yes   | 10  | 10000            |
|                 | 001   | no    |     |                  |
|                 | 010   | yes   | 10  | 10010            |
|                 | 011   | yes   | 00  | 00011            |
|                 | 100   | no    |     |                  |
|                 | 101   | yes   | 10  | 10101            |
|                 | 110   | no    |     |                  |
|                 | 111   | no    |     |                  |

- ▶ Operation: read 10010
  - cache miss
  - retrieve value from main memory
  - overwrite existing cache value

#### Block Size Tradeoffs

- Larger block size
  - ▶ fewer cache misses due to spatial locality
  - longer transfer times of block
  - ightharpoonup fewer blocks in cache ightharpoonup more competition for cache
- ► In practice
  - optimal value somewhere in the middle
  - depends on running process
